

WHO WE WORK FOR

We work for home and business owners, architects, developers, designers and integrators who recognise the importance of good lighting to the success of their projects and call in our expert help to achieve the effects they desire.

...making light work

WHAT WE DO

Re:light designs exciting lighting schemes for a wide range of architectural projects including:

- ▶ traditional and contemporary homes
- ▶ apartment blocks
- ▶ offices (including boardrooms, reception and break-out areas)
- ▶ bars and restaurants
- ▶ retail units/shops
- ▶ hotels and leisure spaces
- ▶ eco-projects

RE:LIGHT Information and Services

OUR SERVICES

We offer a full lighting design service so that our clients get the best possible solution in terms of aesthetics, practicality, energy efficiency, cost, maintenance and compliance.

OUR SERVICES INCLUDE

Initial site visit: to discuss your individual lighting requirements

High level lighting concept design

Producing storyboards that show:

Ideas for placement of light sources

Examples of suitable lighting styles and techniques

Ideas for light fittings and control systems

From the concept design comes the detailed lighting design

Which consists of:

Luminaire layouts and circuitry in CAD format

Circuit loading and switching schedules

An open specification including luminaire data sheets and detailed pricing information

Design drawings for building works related to lighting details

Detailed light level calculations and computer generated images (CGI) of the space to visualise the proposed lighting scheme where required

Samples & on-site lighting trials

Lighting product procurement

Recommendation, specification and supply of light fittings to suit your scheme

Including management of lead and delivery times to suit your schedule

Custom-made lighting

Design, commissioning and supply of unique light fittings where required

Project management

Working as the link between you and your contractors to implement the scheme

Commissioning of lighting control systems to set scenes

OUR PEOPLE

Dominic Triggs, Re:light MD and Lighting Designer:

"The key to successful architectural lighting design is part technical know how, part product knowledge and part creativity combined with the ability to visualise the finished result. Only then can an appropriately and flexibly lit space with visual interest and atmosphere be delivered."

Kate Howard, Lighting Designer:

"Good lighting design is a key element of any architectural plan. Done well it has the ability to transform the way in which we view the finished result and enhance our enjoyment of the space. Creating a considered lighting scheme should be an essential component of any project."

COMPLIANCE

All Re:light lighting schemes are compliant with LG7, Part L of the Building Regulations with regard to energy conservation, and the British Standards code of practice.
